THE BASICS

Why choose a semi-dedicated server?

In the web hosting hierarchy, semi-dedicated servers sit halfway between dedicated servers and regular hosting accounts, offering the best of both worlds.

Our semi-dedicated servers come pre-installed with Varnish and Memcached and offer native support for Git and SVN. You will be able to run multiple background processes at the same time and to set up both MySQL and PgSQL databases.

Built atop our innovative hosting platform, each semi-dedicated server configuration relies on the bulletproof ZFS-SSD combo. The ZFS file system allows for exceptionally effective file compression, whereas SSD drives are widely known for their lightning-fast data access speeds. This is why there are neither file storage limitations nor I/O bottlenecks with WhitePointerNet.

The ModSecurity firewall, which involves an ever-expanding set of rules designed to protect your sites and applications, is enabled by default on all semi-dedicated servers. Plus, antivirus tools are running silently in the background, checking for rootkits and other exploits.

WHY WHITEPOINTERNET

- 24/7 technical support
- 1-hour response time guarantee
- 99.9% network uptime
- 99.9% service uptime
- Antivirus protection
- Multiple daily data backups

PLANS & PRICING

Semi-dedicated servers

Every server includes a 30-day free trial and can be upgraded at any time as your sites grow.

WHY CHOOSE US

Our advantages

SSD storage

SSD drives provide better I/O rates and nearly 100 times faster access time.

Data compression (LZ4)

We rely on LZ4 compression to alleviate the I/O burden and improve the write speed.

Background processes

Native support for scripts running in the background with semi-dedicated servers.

PHP-reserved memory

The semi-dedicated servers have 2 GB of memory reserved for PHP processes.

Simultaneous processes

100 – this is the maximum number of concurrent processes allowed per account.

MySQL connections

20 concurrent MySQL database connections allowed per server.

PHP settings

Switch between different PHP versions and modify the php.ini file freely.

Python settings

You can easily switch between Python 2.7, Python 3.5 and Python 3.7.

Bandwidth redundancy

2-4 Gbps of bandwidth to steer clear of channel overload.

Version control systems (Git, SVN)

Our servers offer full Git/SVN support. No additional software is needed.

GET STARTED

Join our growing family

We invite you to sign up and test our semi-dedicated servers for 30 days. You don't have to submit any credit card, debit card or PayPal details upfront – evaluate our services and make an informed decision before putting any money down.

> I just started and got 24 clients happy with the price and the service! Great help, great turnaround time on requests. Thanks a million times.

William Maynard

> The site is so clear and easy to navigate - it is indeed like heaven on earth. But don't ascend yet - I need you here to host my website a bit longer.

Robert H.

> I have had accounts with other web hosts. I can honestly say that you offer the optimal solution for any web developer. Thank you!

Connor F.

> I did a lot of looking around before I finally came across you. This has been the best hosting experience I've ever had!

Furanku M.
