KVM Servers

Plans and features – hardware virtualization with near-dedicated performance.

Root

full root access to your server

ISO

install the OS you want from an ISO

Weekly

backup of your server included

WELCOME

KVM servers plans and features

KVM Virtual Private Servers give you guaranteed CPU speeds, real RAM shares and the freedom to run the Operating System you want – with performance close to that of a dedicated server.

WHY KVM

Why choose KVM VPS?

The acronym “KVM” stands for “Kernel-based Virtual Machine” – a virtualization technology that takes advantage of the hardware virtualization support offered by many newer Intel and AMD processor models. Baked right into the kernel of the host Operating System, giving it native virtualization capabilities, KVM provides better performance than virtualization technologies that rely on hosted hypervisors running in conventional OS environments.

Native hypervisors run directly on the host machine’s hardware, which means that KVM virtual servers have direct access to the resources offered by the physical host. And since requests are sent directly to the hardware, there’s no need for an additional software layer either. This means less overhead and less virtual machine-generated load.

Experiments have demonstrated that the performance of a properly configured KVM with VirtIO drivers is almost the same as that of an identically configured dedicated server, with the KVM being outperformed by a mere 3%.

KVM ADVANTAGES

- ✓ Support for multiple OSs via ISOs
- ✓ Improved virtual machine separation
- ✓ Enhanced security thanks to SELinux
- ✓ No SWAP partitioning
- ✓ Guaranteed CPU speeds
- ✓ Real RAM shares

PLANS & PRICING

KVM VPS plans

PLAN	CPU CORE(S)	RAM	DISK SPACE	MONTHLY TRAFFIC	IP ADDRESSES	PRICE	
KVM 4	2 cores	4 GB	80 GB SSD	4 TB	1	A$43.10/mo	ORDER
KVM 8	4 cores	8 GB	160 GB SSD	5 TB	1	A$86.01/mo	ORDER
KVM 16	6 cores	16 GB	320 GB SSD	6 TB	1	A$104.17/mo	ORDER
KVM 32	8 cores	32 GB	480 GB SSD	7 TB	1	A$206.53/mo	ORDER

- CentOS (64 bit)
- Debian (64 bit)
- Ubuntu (64 bit)

OS ISOS

- Fedora (64 bit)
- FreeBSD (64 bit)
- LinuxMint (64 bit)
- Scientific Linux (64 bit)

INCLUDED FOR FREE

Bonus features with cPanel

Root access

Each KVM Virtual Private Server offers full root access, which means that you will have complete control over the machine. You can modify the current configuration, install new software, even install a new OS if you want to.

Domain reseller account

A $100 USD-worth domain sub-reseller account with eNom is available for free with all KVM Virtual Private Servers. You can use it to sell domain names to potential customers – or get one for your very own online needs.

ClientExec billing software

The ClientExec billing software is available for free if you want to use your KVM VPS to resell hosting packages. It has feature parity with WHMCS and supports pretty much all big online merchants and domain name providers.

PEACE OF MIND

Get the best of KVM hosting

All KVM Virtual Private Servers on our network are protected by our service guarantees. They are designed to take the edge off of managing a server and to turn it from a tedious activity into something much more relaxing.

SERVICE GUARANTEES

Weekly

backup of your server

99.9%
